Live Yes!

What is PRO?

A PRO (Patient-Reported Outcome) is a response directly from you to a question about a symptom or some other important aspect of your overall health. For example, a report of how frequently you have felt pain in the last week.

What is the Live Yes! INSIGHTS Program?

It is a way to collect and keep track of your PROs. You will have the opportunity to log your PROs as often as you like and then access your information in a tool known as a "dashboard" which tracks and displays your data over time.

The dashboard shows you how your health compares to the larger population and how your health changes (or doesn't) over time. You can use this information to help manage your health. For example, evaluating whether a new treatment is working by looking at how your PRO data has changed—or not—over time.

What happens to my information?

Your information will be stored in a secure database maintained by the Arthritis Foundation's vendor, Qualtrics. It is protected at the same level as banking data. The Arthritis Foundation will never share or allow access to data that is tied to your name or identifying information. Data will only be shared in big batches, called "aggregate" data, with no names, addresses, emails or other personal information connected.

What will the Arthritis Foundation do with my information?

The Arthritis Foundation will use the data and share it with our research and innovation partners to conduct research and increase our knowledge about arthritis. Unlike other programs that collect PRO data, the information collected through Live Yes! INSIGHTS can immediately influence resources and programs for patients through the Live Yes! Arthritis Network and partnering health care providers.

How can my health-care provider use my information?

You can share your information with your healthcare provider as you partner to manage your care. All dashboards can be printed or displayed on a mobile device.

Where can I take the PRO survey?
