Bob Novak (1964-2009)

Many people think of arthritis as a disease of pain and inconvenience. I learned firsthand however that this disease can kill.

This summer, my best friend's husband, Bob Novak, passed away due to complications with scleroderma. This form of arthritis is essentially a hardening of the tissues beneath the skin. In Bob's case, the disease attacked his internal organs - rendering his esophagus, stomach, small intestine and eventually his kidneys useless.

Bob was a young man. Newly married. With a 14 year old daughter. Proof that this disease can strike anyone at any time.

Please consider making a donation in Bob's memory. Perhaps someday this disease will be nothing more than a mere inconvenience to the 46 million Americans living with it.

Special Thanks to:

Join me in my efforts to support Arthritis Foundation, Indiana Chapter!

Many of you know that I work for the Arthritis Foundation, but what I do everyday is more than just a job, its a calling! I'm blessed to be able to help the 48 million Americans living with arthritis raise funds for research.

People like my Grandma Pat! She first started exhibiting the signs of rheumatoid arthritis 35 years ago. Today there isn't a joint in her body that doesn't hurt. And the damage to her hands is irreparable - making even the simplest tasks difficult, like opening jars and buttoning a shirt.

This year, I will once again host the Indianapolis Single Ball Run/Walk for Arthritis, a 5K fun run/walk. If you're in town, I invite you to participate. If you can't, please consider making a donation.

Nearly one in five people has arthritis! So chances are you know someone who lives with this destructive disease, if you yourself don't already have it!

Our fundraising goal is \$125,000. Please say you'll help us find a cure to the nation's leading cause of disability - arthritis. And of course, all donations are tax deductible!
